HONEYWELL HELPS THE PORT OF SAN JUAN MEET DEPARTMENT OF HOMELAND SECURITY REQUIREMENTS

Integrated Digital Surveillance System from Honeywell Will Boost Port Security and Help Protect against Terrorism

MINNEAPOLIS, Dec. 14, 2004 – Honeywell (NYSE: HON) today announced that it has signed a \$4.9 million contract with the Port of San Juan in Puerto Rico for an integrated digital surveillance system. The new system will cover the entire 11-mile perimeter of the port, giving security personnel a complete view of activity in the San Juan Bay and on the port platform. This is a significant step in making the port more safe and secure, and it will help the port meet U.S. Department of Homeland Security requirements.

“Securing the world’s ports has become a top priority since 9/11,” said Fernando Diaz, general security director of the Puerto Rican Port Authority. “The Port of San Juan experiences high levels of traffic throughout the year so we wanted to be even more secure than required. We knew we could count on Honeywell to provide a reliable and affordable security solution under an aggressive schedule.”

The port currently relies on its human resources to perform a majority of security tasks. After 9/11, the Department of Homeland Security established strict criteria for securing national ports to help protect against terrorism by utilizing the latest technology on the market.

To move the port beyond this criteria, Honeywell will install a scalable, closed-circuit television (CCTV) solution that includes Honeywell Enterprise Buildings Integrator™ (EBI) and Honeywell Digital Video Manager™ (DVM). The result: a digital surveillance system that supports integration with other enterprise systems through a single PC workstation. This will allow the new system at the port to interface with the security system in place at the San Juan International Airport. In the event of a maritime or aviation emergency, authorities will be able to manage security operations at either location.

“The Port of San Juan will establish a new standard for port security,” said Carl Rysdon,

2-Port of San Juan

vice president of homeland security at Honeywell. “The new system delivers true integration for all facets of security onto a single platform. In addition, Puerto Rico can expand the power of this system to the rest of its critical infrastructure.”

The Honeywell system will monitor and manage 153 video cameras located throughout the port. Seven of these video cameras will have special night vision capabilities that can detect activity from as far away as 3,000 feet. In the event of an emergency, the system will send an alarm and generate an activity report to alert operators of a possible breach of security.

Operators at the port will be able to view, archive and retrieve data from their EBI workstation without leaving to replace a tape in a VCR or activate a recording. The surveillance system will have 40 terabytes of memory for high-resolution and frame-rate recording. As needs grow, the port will be able to expand storage; there is no limit to the potential capacity.

Plasma displays throughout the command center will allow operators to track port activity with pristine clarity. Using advanced search capabilities, operators also can quickly find and view previously recorded videos, which are stored in the DVM database. The system also will automatically log all activity, providing a complete record of surveillance operations.

To build the system, Honeywell will install 45,000 feet of fiber optic cable and a free space optic (FSO) system to close the network loop and properly secure the infrastructure.

“From ports to pharmaceutical plants, safety concerns are a key driver for facility upgrades,” said Joe Puishys, president of Honeywell Building Solutions. “With decades of experience safeguarding people and buildings, Honeywell has the proven expertise to help customers like the Port of San Juan meet their critical security goals.”

Honeywell International is a \$25 billion diversified technology and manufacturing leader, serving customers worldwide with aerospace products and services; control technologies for buildings, homes and industry; automotive products; turbochargers; and specialty materials. Based in Morris Township, N.J., Honeywell’s shares are traded on the New York, London, Chicago and Pacific Stock Exchanges. It is one of the 30 stocks that make up the Dow Jones Industrial Average and is also a component of the Standard & Poor’s 500 Index. For additional information, please visit www.honeywell.com. Honeywell Building Solutions is part of the Honeywell Automation and Control Solutions business group, a global leader in providing product and service solutions that improve efficiency and profitability, support regulatory compliance, and maintain safe, comfortable environments in homes, buildings and industry.
